# TERMATRAC® TECHNOLOGY

Termatrac is a breakthrough development in the detection of termites, invented and developed in Australia using technology similar to radar. Termatrac is the exciting answer to detecting termites through timber, plaster board, brick or masonry with no interference to the building material or termite activity.

With no drilling, tapping or prodding, in conjunction with other tools Termatrac is the answer to termite detection without termite deflection! With Termatrac, the pest professional enjoys the advantage of accurate detection which equates to satisfied customers.

## Termatrac Operation

Termatrac is simple to operate with a user friendly display and button operated controls. Coupled with our training and support services, you can use Termatrac with ease to search for termites. If Termatrac's around...termites found.

## Termatrac Features

### Large Display

You can not miss the termites, because you cannot miss Termatrac's easy to read liquid crystal display which alerts you immediately if you have discovered termite activity.

### Versatile

Termatrac can be used to find many pest species of termite, detecting movement in a variety of materials. Termatrac can be used by professional pest managers in any number of situations.

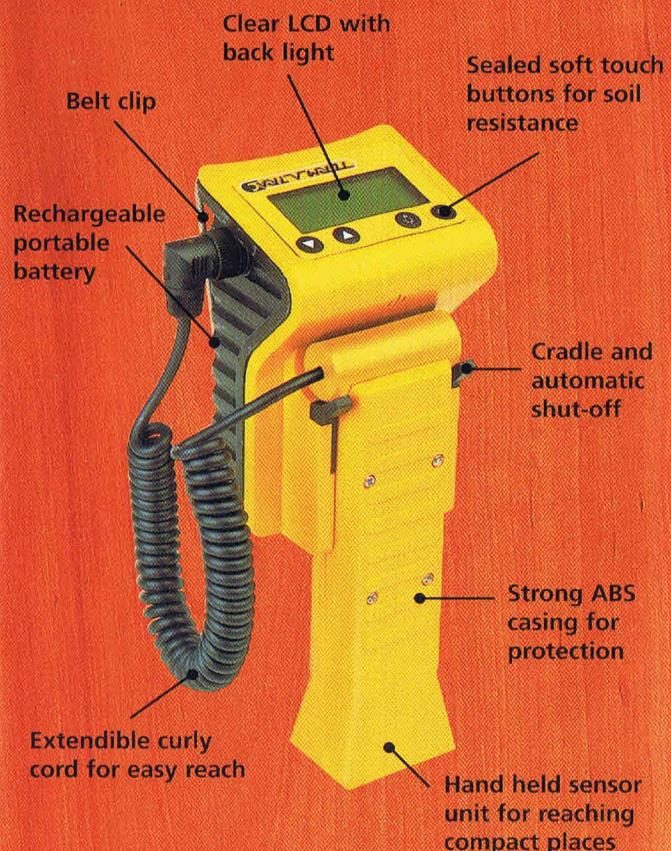

### Durable

Termatrac's hard-wearing construction is backed up by long-life electronics and even a robust carry-case.

### Easy To Use

Soft button controls and a compact, ergonomic design make Termatrac easy to use. To help you develop the best techniques for finding termite activity, we provide national accreditation through Termatrac training. A help hotline is available in case you experience difficulties. Our national distribution network means you can rely on nationwide technical support.

# TERMATRAC® TERMITES FOUND

## HOW IT WORKS

Termatrac, explained simply, emits signals which penetrate the material you are searching. If these signals are interrupted by termite activity, the liquid crystal display will alert you to this activity. Termatrac relays this information to you, so you can pinpoint the termites in an instant. Then you can:

- track the extent of their activity without disturbance
- track termites to entry point
- locate nests via entry point
- determine the most suitable treatment procedures
- monitor termitecide application and bait placement

# TERMATRAC® APPLICATIONS

Every TERMATRAC unit is supplied in a compact, professionally presented case and protected by a foam lined interior.

You can determine if visual evidence is active and reveal concealed activity.

You can track the extent of activity without disturbance.

You can track to an entry point from internal and external areas.

TERMATRAC operates effectively through a range of common building materials and finishes.

You can monitor pesticide applications best suited for that treatment.

Also use TERMATRAC for checking and determining the placement of bait boxes or monitoring stations.

TERMATRAC can provide user confidence and promote customer confidence in professional and effective termite location and control.

TERMATRAC is IDEALLY SUITED IN A WIDE RANGE OF APPLICATIONS AND IS USED ALONG WITH OTHER PEST CONTRAL TOOLS THAT YOU MAY ALREADY USE. TERMATRAC IS THE TOOL OF TODAYS PROFFESIONAL!
